Patriot Glass Solutions

Patriot Glass Solutions is a division of C-Bond Systems and the North American Distributor for C-Bond Secure and C-Bond BRS (Ballistic-Resistant System). Patriot Glass Solutions protects personal, commercial, and government property from looting, rioting, break-ins, and gunfire. Patriot Glass Solutions operates nationwide, through an authorized dealer network.

C-Bond Secure

(Window Film Mounting Solution)

- Increases Glass Strength and Flexibility
- Reduces Curing Time of Film and Eliminates Fogging
- Improves the Adhesion of Window Film to Glass
- Creates a Safer Failure Pattern
- Zero Optical Distortion or Yellowing

C-Bond Secure is a patented, non-toxic, water-based nanotechnology that significantly increases the strength of glass, improves glass flexibility, and enhances the adhesion of window film to the glass. C-Bond Secure improves glass safety by modifying the failure pattern in case of breakage and reducing the probability of spontaneous glass failure due to thermal stress induced by solar window film. It can be used as the applicator for any type of window/glass film. Replacing soap and water with C-Bond Secure provides increased benefits to the glass, an easier film installation, and a shorter curing time, all for the same labor cost and time.

C-Bond BRS

(Ballistic-Resistant Film System)

- Cost-Effective Compared to Other Ballistic Options
- Easy to Install with Minimal Training
- Validated To Provide NIJ Level I, Level II, Level IIA, and UL 752 Ballistic Protection
- Unique One-Way Ballistic Capability
- Retrofit Directly to Glass without Reframing

C-Bond BRS is a ballistic-resistant film system certified to the National Institute of Justice (NIJ Level I, Level II, Level IIA) and United Laboratories (UL 752) ballistic resistance test standards. The system includes a proprietary security film product and C-Bond Secure, a patent-protected, nanotechnology film mounting solution. C-Bond BRS is engineered to maintain the original glass design while dramatically increasing the mechanical performance properties of the glass. It can be installed on existing glass surfaces or can be easily retrofitted into an existing framing structure without the additional cost for structural changes to the building's design. At half the weight of other ballistic-resistant solutions, C-Bond BRS is more cost-effective and easier to install or retrofit.
