

Outside insights for any property

Sunflower Labs® Beehive is a fully-autonomous drone-in-a-box system to observe, secure, inspect and patrol large outdoor properties.

Sunflower Beehive System includes:

- Hive basestation with appropriate power connectors for use in your region
- Bee autonomous security drone
- Low-light sensitive 1080p HD camera tuned for security in normal and low lighting conditions, and capable of streaming real-time 1080p HD video
- Web/mobile/tablet application for control and management of the system

Lease Option

For the lease option, the price starts at \$36,000 with a 1 year commitment + initial setup and shipping costs. For 2 or 3 year commitments, the price is reduced as shown in the table below. After the initial commitment, the lease costs default to \$3,000/mo. Upgrades and replacements to the system are included, as needed, based on system performance and use.

Purchase Option

For the purchase option, the system is offered with the same level of support for the number of years shown in the table. After the commitment and support period, we will offer an upgrade option that will come with a discount and full system replacement.

For the duration of the warranty, we will support, monitor and analyze the performance of the system; provide regular upgrades to the software; and replace any hardware that either reached the end-of-life, or exhibits any problems.

This way we ensure that our customers will always have a working system, which is a significant safety consideration as time passes. Our service also includes all the backend cloud infrastructure, remote access to the control apps, and cloud storage.

Beehive pricing options:

	1 YEAR	2 YEARS	3 YEARS
Lease Option	\$36,000/yr	\$34,200/yr	\$32,000/yr
Purchase Option		\$52,980	\$78,340
